controlled and uncontrolled. More specifically, the mean QoL score of the total sample was -3.1±1.9, the mean score of non-hypoglycemic patients was -3.05±2 and the scoring of the hypoglycemic group was -3.26±1.8, (p ≤0.001). This signifies that type 2 diabetes has a greater impact on QoL when coexisting with hypoglycemia. In addition, non-hypoglycemic patients stated that their QoL would be a little better if they did not have diabetes (-1.58 ±0.85), in contrast
